MSA Technologies

Digital Store Product

Official Team Development Documentation

A complete online business and e-commerce management system for businesses in Pakistan and international markets.

Project Name	Digital Store - Complete Online Business & E-Commerce Management System
Prepared For	MSA Technologies Product Team
Team Members	Zahid, Adnan, Muneeb, and Asad
Team Structure	Four-member team working collectively from scratch
Document Date	15 May 2026

Important Note

No fixed individual responsibilities are assigned in this document. The team will divide and adjust work internally according to skills, availability, and project requirements.

Document Overview

- Project vision and main objective
- Target market and product scope
- Core system modules for the Digital Store platform
- Development approach and phase-wise roadmap
- MVP features and future advanced features
- Suggested technology structure and integrations
- Team workflow, quality process, launch plan, and success goals

1. Project Vision

MSA Technologies will develop a complete Digital Store product from scratch for businesses that want to sell online and manage their complete digital operations from one platform.

The product will help businesses create online stores, manage products, receive orders, automate WhatsApp sales, manage customers, track payments, control inventory, generate reports, and grow through digital marketing tools.

The platform will be suitable for businesses in Pakistan and can later be expanded for international markets.

2. Main Objective

The main objective is to build a complete digital commerce platform that helps businesses create their own online store, sell through web and mobile channels, manage orders, handle customers, track inventory, automate WhatsApp communication, and monitor business performance through clear reports.

3. Team Structure

The Digital Store product will be developed by a four-member team: Zahid, Adnan, Muneeb, and Asad.

The team will work together from scratch as one unit. Tasks and responsibilities will be adjusted internally according to each member's technical skills, experience, and availability.

This document does not assign fixed responsibilities to any individual team member.

4. Target Market

The Digital Store product can serve a wide range of businesses that need a professional online selling and management platform.

Clothing brands	Cosmetic stores	Grocery stores
Electronics shops	Mobile accessories stores	Home decor businesses
Gift shops	Book stores	Pharmacy and healthcare product stores
Small local businesses	Wholesale and retail businesses	International online sellers

5. Product Scope and Core Modules

The system will include the following major modules. Each module should be planned, designed, developed, tested, and improved as part of one complete product ecosystem.

Module	Scope
Online Store Website	Business profile, product catalogue, categories, search, product detail pages, cart, checkout, order tracking, offers, reviews, contact details, and responsive design.
Customer Mobile App	Product browsing, search and filters, cart, checkout, order tracking, customer profile, wishlist, previous orders, notifications, and offers.
Admin Dashboard	Product management, category management, order management, customer management, sales dashboard, inventory tracking, payments, delivery status, discounts, reports, and staff access.
Product & Inventory Management	Products, images, descriptions, pricing, discounts, variants, stock tracking, low-stock alerts, out-of-stock status, and bulk product upload.
Order Management System	New orders, pending orders, confirmed orders, packed orders, shipped orders, delivered orders, cancelled orders, returned orders, order history, and invoices.
WhatsApp Order Automation	Automated replies, catalogue sharing, order taking, customer details, order confirmation, payment instructions, delivery updates, and human handover.
CRM System	Customer profiles, order history, preferences, complaints, feedback, follow-up reminders, segmentation, loyalty points, and marketing campaigns.
Payments & Delivery Management	Cash on delivery, bank transfer, payment gateway structure, payment tracking, courier management, delivery charges, city-wise delivery setup, and future international delivery.

Reports & Analytics	Daily sales, monthly sales, total orders, revenue, top-selling products, low-performing products, repeat customers, inventory reports, payment reports, delivery performance, and campaign results.

6. Development Approach

The product will be developed step by step, starting with a strong MVP and then expanding into advanced features. The team will work collaboratively on planning, research, UI/UX, website development, mobile app development, backend development, database development, admin dashboard, CRM system, WhatsApp automation, payment and delivery integrations, testing, deployment, and continuous product improvement.

All work will be handled as a team effort. The internal task distribution can be changed based on skills, technical strength, availability, and project requirements.

7. Development Phases

Phase	Duration	Key Work	Output
Phase 1: Market Research & Requirement Planning	1-2 weeks	Study digital store requirements, business pain points, customer needs, competitor features, and must-have product modules.	Requirement document and MVP plan.
Phase 2: UI/UX Design	2 weeks	Design the online store website, customer app, admin dashboard, CRM screens, product management screens, order flow, and WhatsApp order flow.	Complete design prototype.
Phase 3: Backend & Database Development	3-4 weeks	Create the database structure, authentication system, product APIs, order APIs, customer APIs, CRM APIs, inventory APIs, payment structure, and reporting APIs.	Working backend system.
Phase 4: Online Store Website & Admin Dashboard	3-4 weeks	Develop the digital store website, product catalogue, cart, checkout, order tracking, admin dashboard, product management, order management, customer management, and reports dashboard.	Functional web platform.
Phase 5: Mobile App Development	4-5 weeks	Develop the customer app with product browsing, cart, checkout, order tracking, customer profile, wishlist, previous orders, and notifications.	Functional customer mobile app.
Phase 6: WhatsApp Automation	2-3 weeks	Create WhatsApp flows for product inquiries, catalogue sharing, order placement, order confirmation, customer follow-ups, and delivery updates.	Working WhatsApp automation system.
Phase 7: CRM, Inventory & Business Tools	2-3 weeks	Complete customer database, inventory tracking, loyalty features, marketing tools, sales reports, customer insights, and business analytics.	Complete business management system.
Phase 8: Testing & Quality Assurance	2 weeks	Test website, app, dashboard, order flow, payment flow, inventory system, WhatsApp automation, CRM, reports, security, and performance.	Stable product ready for pilot launch.
Phase 9: Pilot Launch	2-4 weeks	Test with selected businesses, collect feedback, improve features, fix issues, and prepare pricing model.	Market-tested Digital Store product.
Phase 10: Commercial Launch	After pilot completion	Launch with marketing campaigns, business demos, onboarding process, support system, and subscription packages.	Product ready for sale in Pakistan and international markets.

8. MVP Features

The first version should focus on the most important features needed to launch, test, and sell the product.

- Online store website
- Product catalogue
- Product categories
- Cart and checkout
- Admin dashboard
- Product management
- Order management
- Customer database
- Basic CRM
- Basic inventory management

- WhatsApp order automation
- Basic sales reports
- Customer mobile app basic version
- Business profile setup

9. Advanced Features for Future Versions

- Advanced CRM
- Loyalty system
- Multi-branch management
- Multi-vendor marketplace option
- Payment gateway integration
- Courier integration
- AI chatbot
- AI sales assistant
- Advanced analytics
- POS integration
- International currency support
- Multiple language support
- Subscription and membership tools
- Franchise or reseller management

10. Suggested Technology Structure

Area	Description
Frontend	Online store website, admin dashboard, and customer web ordering system.
Mobile App	Android app first, with option to expand to iOS or cross-platform app later.
Backend	Secure APIs, authentication, role-based access, product database, order database, customer database, inventory database, and reporting system.
Integrations	WhatsApp Business API, payment gateways, courier services, SMS gateway, email system, Google Maps, push notifications, and future AI chatbot system.

11. Team Workflow

The team should follow a proper weekly and daily workflow to keep development structured, transparent, and measurable.

Weekly Meeting

- Completed work
- Pending tasks
- Current blockers
- Bugs and issues
- Next week targets
- Product improvement ideas

Daily Work Tracking

- What was completed
- What is planned next
- Any issue or support needed

Project Management

- Features
- Bugs
- Deadlines
- Testing status
- Deployment status
- Product feedback
- Client and business feedback

12. Quality Assurance Checklist

- All product flows are tested before release
- Website and mobile screens are responsive and user-friendly
- Order flow works from product selection to delivery status
- Admin dashboard data is accurate
- Inventory updates correctly after orders

- WhatsApp automation handles common customer messages
- Payment and delivery statuses are correctly tracked
- Reports show correct sales and customer data
- Security, access control, and performance are tested

13. Product Success Goals

- Better online presence for businesses
- More online sales
- Faster order processing
- Better customer management
- Reduced manual work
- Clear stock and inventory control
- Better payment and delivery tracking
- Improved customer experience
- Smart sales automation
- Growth in local and international markets

14. Recommended Development Priority

- Online store website and product catalogue
- Admin dashboard and product management
- Cart, checkout, and order management
- WhatsApp order automation
- CRM and basic inventory
- Customer mobile app
- Payment, delivery, and advanced analytics

15. Final Recommendation

MSA Technologies should start with a strong MVP and first target small and medium businesses in Pakistan. After testing with real businesses, the product can be improved and expanded for international markets.

This plan will allow Zahid, Adnan, Muneeb, and Asad to build the MSA Technologies Digital Store product from scratch in a structured, professional, and market-ready way while keeping team responsibilities flexible and skill-based.
